PROFILE

Welder by day, builder by night. Born in Namangan; moved to Tashkent almost three years ago to work as a welder — still my day job while I ship real, live products in my own hours by directing AI agents, mainly **Claude Code**. I don't hand-write code, and I don't pretend to: my skill is turning an idea into a deployed, working product by specifying clearly, testing like a real user, and iterating fast with AI. In 17 months: **170 public GitHub repositories**, **6 live products**, and real IELTS students and teachers using them for weekly mock exams.

HOW I BUILD — REAL SKILLS

AI development	Claude Code daily (plan → build → debug → deploy), AI agents and workflows, prompt/spec writing, reviewing product behaviour instead of syntax
Build & deploy	GitHub repos, GitHub Pages, GitHub Actions (automated sitemaps); staging → production flow; custom domains & DNS
Data & auth	Firebase Authentication, Firestore data modelling; Supabase and Stripe at experimental level
Growth & polish	Google Search Console, sitemaps & SEO, GoatCounter analytics, PWA basics, UI taste (Nothing-inspired design systems), localization (UZ / EN / RU)
Honest limits	I read and adjust HTML / CSS / JS with AI help, but I'm not a hand-coder — I'm the director in the loop, not the typist

LIVE PROJECTS — ALL BUILT SOLO, WITH AI

flarestamina.com — free IELTS ecosystem: 73 listening + 20 reading tests with instant band scores, essay platform with AI feedback (Firestore), speaking lab with 166 topics, band calculator, 40-day challenge tracker. Teachers run real weekly mocks on it.

Pangeya Writing Lab — exam-day essay platform inside the ecosystem: Firestore backend, task images, one-page exam PDFs, teacher feedback flow — used in real mock exams.

minnos.cc — “learn English, one cat at a time”: collectible cat-idiom game, 26 idioms with audio and Uzbek translations.

ID Photo Maker — 100% client-side passport/visa photo tool with on-device AI background whitening. No uploads, no server.

Explainer Engine — Python pipeline: topic in → branded MP4 explainer video with synthesized music out.

pierics.com — daily Wordle-style word game that doubles as an IELTS vocabulary trainer.

Wedding invitation builder — 3 templates × 3 languages, PNG / PDF / live-link export; my first paid product (flarestamina.com/wedding).

FACTS & LANGUAGES

GitHub: 170 public repositories since Feb 2025 — products, staging copies, experiments, and 70+ individually built IELTS test pages. **Languages:** Uzbek (native) · English (C1) · Korean (basic)

Availability: full-time, immediately — the day I'm hired as a vibe coder, the welding mask comes off for good. This is the career I choose.

Everything on this page is verifiable: the products are live and every repository is public.
